

Engineered implementation

Achieving project quality safely, on time and within budget

Challenges

Maintaining control of project safety, quality, timing and costs are vital elements in completing important projects within your business successfully.

The project could be a plant upgrade, a major equipment overhaul, installation of additional plant or development and implementation of leading-edge technology. The site could be a greenfield, brownfield, or involve work within an operating plant.

Solutions

HRL personnel have first-hand experience and expertise in managing large, complex design and construct projects and planned shutdown outages on behalf of clients.

HRL can provide effective project implementation and management solutions that are tailored to your specific needs through:

- understanding your situation and the particular issues involved in your project and site – including those within an operating plant
- understanding fully your priorities and ensuring that all decisions taken are in your best interest
- using our technical specialists to ensure a quality outcome from contractors
- being flexible in the range of services we provide.

Benefits

HRL's extensive expertise in project implementation and management can help your organisation by ensuring your project:

- benefits from value-adding at the design stage
- benefits from effective tender and contract preparation and effective tendering
- is delivered in a way that meets your design criteria and operational requirements
- is delivered to the required level of quality and safety, and is on time and within budget.

HRL handles routine as well as unique and complex projects
